Assignment – 4

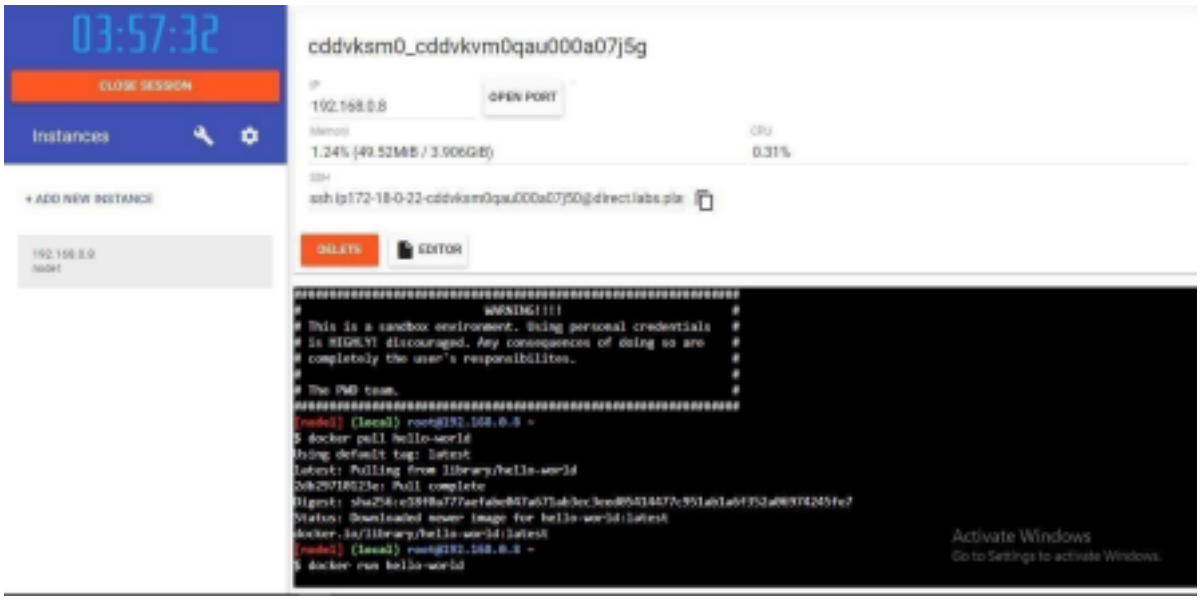
Assignment Date: 04/11/2022
Student Name: Dhanush M
Student Roll Number 311119104019
Maximum Marks 2 marks

Question-1:

Pull an Image from docker hub and run it in docker playground.

Solution:

- Pull an image *uifd/ui-for-docker* from the docker hub
- This image is used for viewing and managing the docker engine
- Use docker pull image_name and docker run -it image_name commands to ● Run the above image in the Docker Playground



Question-2:

Create a docker file for the job portal application and deploy it in Docker desktop application. **Solution:**

- Create a docker file for build and deploy flask app.
- Use docker build -t image_name. In the current directory to start building the
- docker image and deploy in our local docker
- Use docker run -p 5000:5000 image_name to run in local system

CODE

```
FROM ubuntu/apache2
```

```
FROM python

COPY ./requirements.txt /flaskApp/requirements.txt

WORKDIR /flaskApp

RUN pip install -r requirements.txt

COPY . /flaskApp

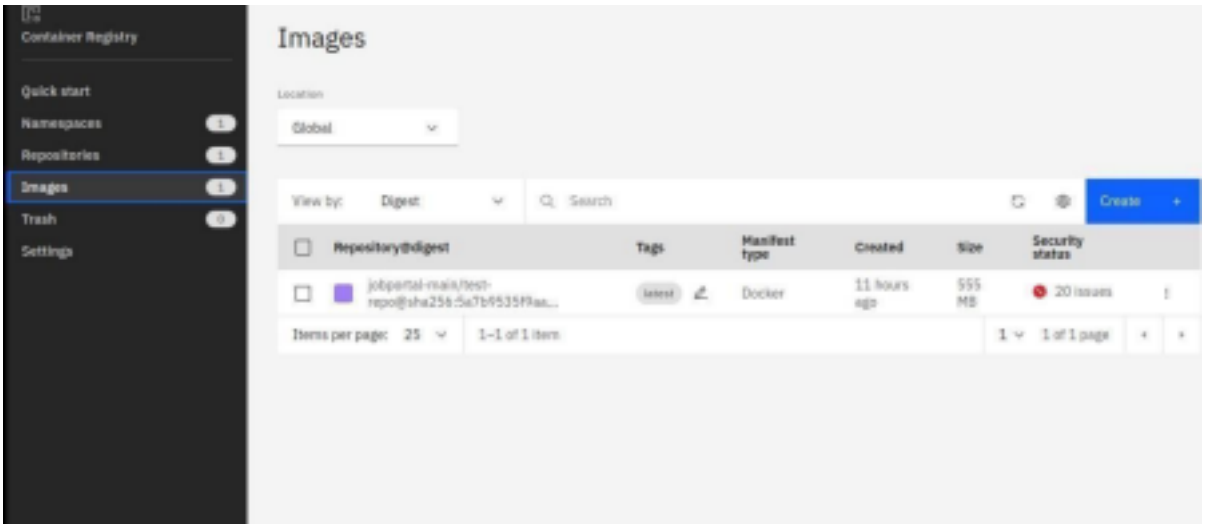
ENTRYPOINT [ "python" ]

CMD ["app.py" ]
```

Question-3:

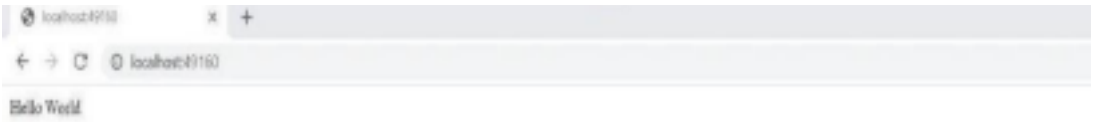
Create a IBM container registry and deploy hello world app or job portal app. **Solution:**

- Log into IBM cloud
- Create a container registry
- Using IBM Cloud CLI, install the container registry plugin in our system ● Push our docker image into the created container registry using docker push So, our job portal app is deployed in the IBM container registry



OUTPUT:

“HELLO WORLD”



Question-4:

Create a Kubernetes cluster in IBM cloud and deploy hello world image or job portal image and also expose the same app to run in node port.

Solution:

- Log into IBM cloud
- Create a kubernete
- Using IBM Cloud CLI, install the ks plugin in our system

- Create a cluster in the kubernetes
- Now, go to the kubernetes dashboard where we need to create a service based on a ● yml file (given below)
- In that file, we have to mention *which image we are going to use* and the *app name*
- Take the public IP address and Nodeport since we exposed the *flask app in nodeport*
- Finally, we got the url address where our flask app is hosted

CODE:

```
apiVersion: v1 kind:
Service metadata:
name: job-portal-app
spec: selector:
app: job-portal-app
ports: - port: 5000
type: NodePort
---
apiVersion: apps/v1
kind: Deployment
metadata:
name:
job-portal-app labels:
app: job-portal-app
spec: selector:
matchLabels: app:
job-portal-app
replicas: 1
template:
metadata: labels:
app: job-portal-app
spec: containers:
- name:
job-portal-app image:
image_name ports:
- containerPort: 5000
env:
- name:
DISABLE_WEB_AP
P
value: "false"
